

Monthly maintenance and support

For the Pluggz platform, after launch

To keep the platform secure, stable and performing well after launch, the following ongoing maintenance and support plan applies.

The monthly fee

	Per month	What it covers
Maintenance and support	£120	Everything listed below, from server monitoring to small feature work
Video streaming	£10 to £12	Cloudflare Stream, charged on how much video is stored and watched, passed through at cost with no mark up

The streaming figure moves with use rather than being a flat charge, so it is itemised separately on each invoice rather than folded into the fee.

What the maintenance fee includes

- Regular server health monitoring
- Website and application uptime monitoring
- Bug fixes and issue resolution
- Security updates and patch management
- Performance optimisation
- Database maintenance and optimisation
- Backup monitoring and recovery support
- SSL certificate monitoring
- Dependency and package updates
- Minor interface improvements
- Technical support and troubleshooting
- Error log monitoring
- Deployment of small feature enhancements, within reasonable scope
- A monthly review of the platform's health

Response times

Kind of request	Response
Critical issues	Within 24 hours
Standard support requests	1 to 3 business days

What it does not include

- Development of major new features
- Large interface redesigns
- Third party subscription costs
- Infrastructure or hosting charges
- Major architectural changes
- Mobile application development

Anything beyond routine maintenance is quoted separately once the requirement has been discussed, so nothing arrives on an invoice unexpectedly.

What it gives you

- A stable and secure platform
- Faster resolution when something goes wrong
- Better performance and reliability
- Less downtime
- Continuous technical support
- Problems found and fixed before they are noticed

In summary

£120 per month for maintenance and support, plus **£10 to £12 per month** for video streaming at cost. The streaming line is itemised separately and moves with actual use.
